

What Is The Best Cow Feed?

Cattle breeding is becoming more and more common. This is mainly due to the increasing contribution of cattle in our lives. Whether it is beef cattle or dairy cows, they have made outstanding contributions to our health. Cattle breeding is not simple. It takes a lot of hard work to raise high-quality cattle. Breeders are required to strive for excellence in breeding technology and feed.

Breeding technology needs to be learned from many sources. Long-term breeding experience will sum up high-quality breeding technology. At the same time, the choice of cattle feed is worth discussing. There are many types of cattle feed on the market, so what is the best cattle feed?

The best cattle feed mainly includes the following:

1.Grains

Grains are rich in nutrients, which can make cattle grow quickly, which is even more beneficial for beef cattle, because grains can make cattle gain weight quickly. Moreover, the cost of grain is relatively low, which can effectively reduce the cost for the pasture. In the winter when there is a lack of high-quality hay, grain is also a good choice.

2.Hay

Hay provides rich nutrients for cattle, but hay must be cut when it is freshest. Fresh hay is more nutritious than dry hay and is a good food source for cattle. The best way to store hay is to grind it into grass powder and store it dry to prevent rot and damage.

Different kinds of hay have different nutritional content. For example, Alfalfa hay is high in calcium and phosphorus, but some hay is high in protein. The most appropriate feeding method is to mix different kinds of hay, which provides a rich

and comprehensive nutrition for cattle.

3. Herbage

For pasture, planting grass is the most frugal way to feed, so that cows can not only eat the most abundant grass, but also save a lot of money.

4. Concentrate

Concentrates such as oats, corn, wheat, barley, sorghum, wheat bran and liquid supplements are high in nutritional value and low in fiber, and concentrated feeds can be an excellent supplement, but the needs and body weight of the cattle should

be carefully considered when providing such feeds to prevent digestive problems in the cattle.

The above are several good cattle feed, you can choose these when feeding, the use of our [feed production line](#) can play a high efficiency and high quality production effect. The whole production line is made of food grade stainless steel, the use of highly automated production mode, effectively reduce manual intervention, production quality is very high, by the major manufacturers welcome. In addition, [our Loyal](#) instant noodle production line, baby rice noodle production line and bean meat machine sales are very high.

When choosing feed for cattle, the choice should be made according to the type and weight of cattle. Only by choosing the most appropriate feed for cattle can they get the fastest growth.
