## Dryer Grains Introduction

Dryer grains are composed of the endosperm, germ and bran. The germ is the embryo of a grain and the endosperm is the outer

layer that contains the nutrients for germination. The bran is made up of the chaff and other removed parts of the grain. Dryer grains are divided into three categories based on their moisture content: low moisture, medium moisture and high moisture.

**Low Moisture Dryer Grains:** These grains have a moisture content below 12 percent. They are used in dryers with a capacity less than 25 kg/h.

**Medium Moisture Dryer Grains:** These grains have a moisture content between 12 and 24 percent. They are used in dryers with a capacity between 25 and 50 kg/h.

**High Moisture Dryer Grains:** These grains have a moisture content greater than 24 percent. They are used in dryers with a capacity greater than 50 kg/h.

## **Soybean Flour Barley Oatmeal**

Soybean flour barley oatmeal is a breakfast item that can be cooked quickly in the morning. Soybean flour is a type of gluten-free flour made from soybeans. It has a neutral flavor and can be used in many recipes. Barley is also a gluten-free grain, and it can be used to make oatmeal. Oats are ground into a fine powder and then mixed with water to form a paste. The paste is then cooked in boiling water or on the stovetop until it becomes thick. Soybean flour and barley are two types of grains that can be cooked in the microwave.

To cook soybean flour barley oatmeal in the microwave, wet the oats and add them to a microwavable bowl. Add enough water to cover the oats and stir well to combine. Microwave the oats on high for 1-2 minutes, or until they are heated through and soft. Stir occasionally during cooking so that they do not stick to the sides of the bowl. If desired, toppings such as sugar, vanilla extract, or honey can be added before serving.
