

Fully automatic bread crumb production line

Bread crumbs is a widely used food additives, used for fried food surface, such as: fried chicken, fish, seafood (shrimp), chicken thighs, chicken wings, onion rings, etc., its flavour crispy and soft, delicious and nutritious.

Breading food products helps to seal in moisture when cooking, deep-frying or pan-frying. It also provides a crunchy and delicious exterior, and the golden-brown color makes the food more attractive.

The consumption of breaded products has increased tremendously during the past decades. Also breaded products have evolved beyond the traditional crumb in terms of functionality, potential health benefits, flavor, texture, and appearance.

Rusk is mainly used as a filler, an ingredient for dried stuffing mixes or a binding agent in hamburgers, sausages, pies, and other compound meat products. It is also a carrier for flavors, colors and seasonings. Rusk is important for its absorption, texture and color properties.

Breadcrumbs, rusk and croutons come in many shapes and sizes. The majority of producers have defined very specific properties. These characteristics are based on the customer requirements for appearance (shape, structure and color),

texture and technical properties (absorption, moisture content).

With great process knowledge and testing capabilities loyal features all that it takes to produce a product that lives up to these high standards. That is what leading company's all over the world have discovered when choosing loyal as their partner.

Feature Of Bread Crumb Process Line:

1. High degree of automation: The bread crumb production line has a very high degree of automation, which can well meet the needs of customers and fully meet the needs of various enterprises.
2. Large output: It can realize multiple batch processing, thus avoiding problems such as equipment downtime and long downtime due to different batches. The output of the equipment is large, thus ensuring the production efficiency and quality. At the same time, the production speed of the equipment is fast, and the output can be adjusted at any time according to the output needs of different users.
3. Low energy consumption: It can effectively reduce the utilization rate of energy and achieve the purpose of saving costs.
4. Sanitation and cleaning: The equipment adopts a new type of dust removal equipment, which can well avoid dust pollution to the surrounding environment and ensure environmental hygiene. In the process of processing, a

certain amount of dust will be generated. If the dust is not effectively removed, the dust will cause harm to the health of the workers.

5. Easy to operate: The device is easy to operate and easy to use, whether it is a small-scale enterprise or a large-scale enterprise, it can be easily used.

The above are the characteristics of the bread crumb production line. This equipment has the advantages of large output, high efficiency and low energy consumption, and can meet the needs of various customers.
