

High Quality Pet Feed Production Line

Pet food production line is assigned to pet food with innovative shapes, unique taste and color, and to scientific nutrition proportion and easy to digest and other features to adapt to the constantly evolving pet food market. Taste of varied shapes and meet the needs of all kinds of pet food. Pet food production line by mixing powder, double screw extruder, air machine, drying and seasoning line

The pet food production line uses high-expansion corn flour grains as the basic raw material, supplemented by bone meal, meat, protein, vitamins, fiber and other nutrients, and cooperates with a screw extruder to produce pet dog food of different shapes through strong extrusion and instantaneous expansion molding. Cat food and other food pellets, and also produce aquatic feed floating feed, mackerel feed pellets, goldfish feed pellets, shrimp feed pellets, crab, mud, bullfrog and other feeds and foods. The dried flavor coating enhances the taste of the final product, and the final set is automatically packaged. The particle size can be from 0.9-15mm to feed fish of different sizes. Our pet food production line has high output and high quality products. It is the first choice for large and medium-sized feed processing plants, aquaculture farms and pet food industries.

The Production Line Details

Capacity	120-150KG/h; 200-250KG/h; 300-500KG/h
Electricity supply	Customized according to your local electricity situation.
Machine details	1. Stainless steel, :201, 304, 316, on request. 2. Electrical components can be ABB, Delta, Fuji, Siemens; famous brands.

Certificates	CE,GOST,TUV,BV
Raw material	Flour, Bone Meal, Corn Meal, Bean Meal
Product colour	Brown, Green, Pink, Yellow and so on

1. Fully functional equipment: The most basic function of the pet production line is to produce different types of products, such as cat food, dog food, canned cat food, etc. According to different types of products, the machine can adjust the production parameters according to customer requirements, so as to meet the different needs of customers.
2. Advanced technology: In the process of pet food processing, the advanced degree of technology directly affects the quality of pet food, pet food production line with advanced technology can reduce product quality problems in the production process.
3. Reliable quality: The pet food production line adopts advanced equipment, and has undergone strict testing from the selection of raw materials to the packaging of finished products. The equipment includes feeding system, mixing system, extrusion system, conveying system, etc. Each part has strict control procedures to ensure that the products produced meet the quality requirements. In terms of quality management, the equipment is equipped with an online monitoring device and a computer control system, which can monitor the operation of the equipment in real time and ensure product quality.
4. Safety and environmental protection: The product quality of the pet food production line is also closely related to the safety of the environment. To this end, we have adopted high-quality, high-standard production technology, and adopted advanced technology and equipment in raw materials, processing, packaging, etc.,

to avoid adverse effects on pet food caused by the use of inferior raw materials and equipment, Effectively guarantee the safety and environmental protection in the pet food production process.
