

# How many pounds of grain does a cow need per day?

The prospects of cattle breeding are very broad. Now the general economic level has been comprehensively improved. At the same time, the world population is also growing rapidly. This makes the demand for cattle continue to rise. The expansion of market demand makes more and more people involved in cattle breeding. many. Cattle breeding has a very broad market prospects. And cattle are a kind of animal that is more affordable, with fewer diseases. And a relatively high return for farmers.

When raising cattle, you need to pay a lot of effort on cattle feed. Only by feeding high-quality and suitable cattle feed can the cattle get rich nutrition and grow into the ideal look in the shortest time. How much do you feed the cattle every day? Is a pound of grain more appropriate?

Cattle's diet is mainly divided into concentrated feed and roughage. Concentrated feed refers to a nutrient-rich feed made from a mixture of various raw materials. While roughage refers to feed such as corn stalks that can allow cattle to ruminate. The ideal feeding method is to mix and feed the concentrate and coarse material in a certain ratio. It can improve the digestibility of the feed. However, for large-scale farms, due to the relatively large labor costs. This may not be possible.

At this time, the method of separate feeding can be adopted, feeding coarse material first, and then fine material to ensure that the cow can eat more, promote more food intake. And reduce the amount of leftover in the trough. The specific consumption of cattle is about 110 to 120 pounds of wet feed or 50 to 55 pounds of dry feed per day. If you want cows to produce more milk or grow faster, you have to feed them more.

Under the combined feeding method of coarse and concentrated feed, usually 30 to 35 pounds of coarse feed and 25 pounds of grain mixture are enough. The grains include corn, soybean meal, minerals and vitamins.

During the growing season of the forage, the farmers can store more coarse feed as the cold season to feed the cattle. If the concentrated feed is bought directly from the store, it is more cost-effective, because these concentrated feeds have very professional formulas. And the manufacturers have been professional and professional. Derived from precise calculations, it can further promote the healthy growth of cattle.

[Shandong Loyal Industrial Co., Ltd.](#) is a professional food machinery manufacturer. It can provide manufacturers with high-quality [feed production lines](#) and cattle feed formulas. The production line is high-quality, low-cost, cost-effective, has a long use time, and the feed produced is more nutritious. Comprehensive and better palatability, it has been unanimously

welcomed by manufacturers. We have also helped manufacturers from all over the world to improve production efficiency and expand the market scale. We look forward to cooperating with you!

The feeding of cattle is relatively simple. Although the more cattle you feed, the faster the growth of cattle. But it must be kept within a reasonable range. If you have any other questions, please feel free to contact us. We will be Sincerely at your service!
