

# How Much Is 1 Cup Of Breadcrumbs In Grams?

Breadcrumbs are frequently used ingredients in modern cooking. Its main function is to relieve the time that food is fried and scorched, so that the food has the effect of being crispy on the outside and tender on the inside. It exists in the form of food additives. Breadcrumbs are not only versatile but also very easy to obtain. They are sold in large, medium and small shops. Of course, we can also make them ourselves.

In many food tutorials, you will find that many bloggers will say adding a cup of breadcrumbs or two cups of breadcrumbs, etc. How much is 1 cup of breadcrumbs in grams?

In fact, usually a cup of breadcrumbs is about 119 grams. Knowing the exact number will be more conducive to our cooking. Of course, the weight of different cups will vary. But most of them are around 119 grams. You can use it according to the specific amount of ingredients. Bread crumbs can not only be used to make fried foods, but also can be used to make some fillings. It can put in thick soups to increase viscosity, put into pasta or used as decorations for pastries, etc.

If we need breadcrumbs urgently, we can make it ourselves, and it is very convenient to make. One cup of bread crumbs requires about 2 slices of fresh bread. The specific production process is as follows:

First choose two slices of fresh bread, cut the bread into small pieces. Then spread the cut pieces of bread evenly on the tray of the oven, and bake for about half an hour until the pieces of bread become crispy. After cooking, open the door of the oven, let the water in the oven disperse and let the bread cubes cool.

Take out the bread cubes after cooling, put them in a masher, or put them in a bag, and gently break them with a rolling pin, so that the simple bread crumbs are made, and two slices of bread can be made a cup of bread crumbs.
