

What is Cereal bar production?

Changing the mold can change the shape of the cereal bar
Changing the mold can change the shape of the cereal bar
Many people often eat cereal bars. Corn bars are a kind of ready-to-eat food with crisp taste and rich nutrition. When traveling and stored for a long time at home you can carry them. And they are very convenient to eat. The gradual expansion of the cereal bar market makes many manufacturers began to produce cereal bar. The cereal bar market is also growing rapidly. So what is the production mode of cereal bar?

The production of cereal bars is relatively complex and requires high-quality equipment to complete the production. Shandong Loyal Industrial Co.,Ltd. Will provide high quality [grain bar production line](#) for the major manufacturers. So that the production of manufacturers more smoothly.

Sugar pot, mixer, extrusion molding machine, packaging machine and other equipment constitute a cereal bar production line. The specific production process is as follows:

First of all, oats, rice, corn and other grains, as well as nuts, dried fruits, candies, chocolate cereal bars, etc. Put they into the sugar boiling pot to soak the sugar. Immerse in a sealed state. It has short time and less nutritional loss . And it can effectively maintain the original flavor of the raw materials. Then put the raw materials into the blender and mix them. It gives the bars a more flavorful texture by mixing them evenly.

Convey the mixed raw materials to the extrusion molding machine through the conveyor. I puffs the material and cuts it to the desired shape. Chang the mold can change the shape. At

this point, cereal bars complete and finally in a packaging machine to complete production.

[Shandong Loyal Industrial Co.,Ltd.](#) Cereal bars production line adopts frequency control and PLC control system, can realize highly automated production, has a very high production efficiency and production quality, production by the cereal bars at the top level of the industry, in addition, the use of the line can also produce proteins rods, bars, meal bars and other products, with very strong practicality.

The most important thing is that the quality of the production line is stable, the whole machine is made of high quality 304 stainless steel and the host and accessories of international

famous brands, wear resistance, long use time, easy maintenance, is the major manufacturers very reliable equipment. In addition, we can also provide customized services, in this industry for many years of production experience so that we can promise to the major manufacturers that we will be able to let you experience the highest cost performance, let you harvest the broadest market. Our biscuit production line, soybean block extruder and snack food production line are also hot sellers.

The production level of grain bar depends on the quality of the grain bar production line. The era of mechanization is also affecting the food processing industry. Efficiency is life.
